This term we are exploring ‘creativity, design and technology’ as our Inquiry Unit, and as a part of this theme we are going to visit Scienceworks. Students will explore exhibitions such as ‘Sportsworks’, ‘Nitty Gritty Super City’ and ‘Think Ahead’ where they will be trying to answer questions such as: What will our cities look like in the future? How will new materials change our houses, cities and clothes? What will we eat? How will we use the space around Earth?

Students will also participate in a problem-solving program led by museum staff. In this session, students will carry out a series of investigations into real life scenarios and be introduced to useful problem solving strategies. The session will demonstrate the usefulness of maths to everyday life and introduce problem solving strategies in a practical and fun way.

We will be travelling by bus and will leave school at 9.00am sharp and be returning to school by 3.30pm. Students need to bring their play lunch, lunch and drinks in a small back pack.

The cost of the excursion will be $22.00.

Kind regards
Ethan Shaw and Theresa Myring
